Rudston. 1609

A double Almanacke

and Prognostication for

the yeare of our Re-

demption. 1609

Being the first from leape yeare.

Rectified, appropriately for the pa-

rallell of our Cantabrigian clime,

but like indifferently serving

for the middle partes of this

whole Monarchie of

great Britaine.

Sub Latitud. 52. 20.

Sub Longitud. 21. $\frac{1}{3}$

By Thomas Rudston Mytho-

mathem.

LONDON

Printed for the company of

the Stationers.

manacke for this present yeare. 1609.

Euerie month of the Almanacke is contained in a seuerall page and being distinguished into 9. Columnes; compriseth in th 1. the number of the daies of the month noted at the head: in th 2 the Dominicall letters: in the 3 the olde Saints daies & feat daies, moueable & fixt: also the fasting or Ember daies, times o marriage, prohibited or alowed, & the Essoine daies, daies of R Returna brevii, & daies of appearãce: in the 4 ẏ motion of ẏ S vnder the Zodiacke, noted downe in signes & degr: in the 5. he comming to south in houres and minutes, according to very ex act calculation destinated to this purpose, that by adding thert the houres and minutes set downe in this note heere following against your Hauen there found, you might haue in the prodn the time of high water in any notable Hauen about this whol Iland. The note heere followeth.

The names of the Hauens.	Houres & mi. to be added to the ☾. cõing to the South.	
Quinbor. Southham. Portsmo.	0	5

Pol. Don. Yar. Harwich. Wight,	1	30
Calice, Rye, Winchelsey, Calshe.	11	15

The 6. columne serueth to shew the time of the Changes, Quarters and full of the moone in houres and minutes. The 7 containeth the number of the daies: the 8 the Dominical letter, according to ỳ Gregorian or reformed Kalender vsed in forraine parts. At the head of euerie month, certain phisical verses, being prefixt, tending to the health of the body in dyet (or otherwise) fitting the time of the yeare.

To the Reader

COurteous Reader, not long since a friend of mine, one Maserles gaue me to peruse a Manuscript Coppie of an Ephemeris in our Mother tung by him supputated for manye yeares to come, and referred to the Meridian of London, which vpon collation, I found so absolute and exactly to expresse the motions of the Cælestiall bodies, both sunne, Moone and other Planets, according to all moderne obseruations, and especially e of the Tresnoble Tycho Brahe, the Phœnix of Astronomers, that I could not, knowing it tended to the generall weale, but giue notice thereof in publique, to the intent that if he publish it (as then he was resolued) any hauing vse of such labours may reap the pleasure and profit thereof. Vale. Yours T.R.

A note in more particular, of the moueable Feasts

A Prognostication for the yeare of our Lord 1609.

First after Leape yeare.

Argued from the Positures and Mutuall configurations of the Luminous bodies of the Celestiall Orbes, to this our Opacouse Globe of the Earth.

By Thomas Rudstone Philomathem.

¶ Printed at London for the Company of Stationers.
1609.

When the Infortunes ♄ and ♂, are aspected each of the other, or of the ☉ or ☽, or tht ☿ and ☽ one of another by ☌, ☐, or ☍ aspect.

When the ☽ is in ♊, ♌; the signe ruling the member cut, or the burnt away.

When the Ayre is extreame hot, or cold, or the person is aged about 50. or under 14. yeares.

Let bloud.

When the Fortunes ♃ and ♀ bee aspected each of the other, or of the Lights, or the lights one of the other, by a good aspect of ✶ or △.

When the ☽ is in { ♋ last part of ♏ or ♓, / the first part of ♎ or ♒ / ♈ or ♑. / In any of them } for the Cholerik. / for ♄ Melancholi. / for ♄ Flegmatick / for ♃ Sanguine.

Furthermore, for youth, from change to the first quarter, for middle age, from the first quarter, to the ful: for elder age, from full to the last quarter. And for old age from the last Quarter to the change. In Spring, on the right side. In Autumne on the left, in a faire temperate Morning, after good digestion, fasting, abstinence, from exercise, and some preparatiue first ministred, vsing after it meates of light digestion, and not sleeping presently, nor stirring violently.

Purge with { Potions. / Pilles. / Electuar. } the ☽ in { ♏. / ♋. / ♓. } { Being happily aspected by ♃, or △ of ☉ or ♂, for cold diseases, of ♀ for Chol. & of ♄ for Melancholy.

Bath { for hot diseases, / for cold diseases, } the ☽ in { ♋. ♏. ♓. / ♈. ♌. ♐. }

Stop Fluxes, Rhumes, & Catarres the ☽. in ♉. ♍. ♑.

Take Preparatiues, the ☽ in ♊. ♎. ♐.

Take Vomits, the ☽ in ♈. ♉. ♑.

Take Gargarismes, the ☽ in ♈. ♋. ♑.

Take Glisters. the ☽ in ♎. or ♏.

Comfort the vertue { Attractiue, / Retentiue, / Digestiue, / Expulsiue, } the ☽ in { ♈. ♌. ♐. / ♉. ♍. ♑. / ♊. ♎. ♒. / ♋. ♏. ♓. }

Of the foure Quarters of the yeare.

Winter.

THis Quarter vſually accounted the firſt, in courſe of Nature is the laſt, and beganne the laſt yeare, 1608. the 11. day of December, at 10. of the clocke, and 6. minutes before Noone, when as the Sunne entring the firſt minute of the Dodecatemorie of Capricorne, hadde made his greateſt declination from the Æquator, to the quantitie of 23. degrees, 32. minuts, and being arriued to the fartheſt point of his digreſſion, from our Zenith, was mounted at his meridian altitude in our Horizon, but 14. degrees, 8. minuts, producing vnto vs the ſhorteſt day, and longeſt night in the yeare. Which by the generall diſpoſition of nature, ſhould be cold and moiſt, and by the prefiguration of the Heauens, is moſt like to keepe his naturall quality: for the beginning of the Quarter will be exceſſiue cold, with hard Froſts, but afterwardes diſſolued into huge Snowes, will proue very wet and ſtormy.

Spring.

SPring, vulgarly taken for the ſecond Quarter, is reckoned to bee the firſt of Aſtronomers, and beginneth this preſent yeare, 1609. the tenth day of March, at ten of the clocke, 47. minuts before Noone. Sol then perceiuing the equinoctiall point of Aries, maketh the dates and nights equall through the whole world, and being mounted in our Horizon, to the quantity of 37. degrees, and forty minuts, beginneth for to caſt his beames more perpendicular vppon the Plane of this portion of the

Globe of our habitation, ingemniating & thickening his light (Calor vero densatum lumen) and by his nutritiue warmth produceth the fruites of the earth, emmanteling Ops in greene, whose quality is to be hot and moist by Nature, which in moysture (most probable it is) that it will obserue, but not in heate, for it will somewhat extraordinarily be inclined to cold, till toward the latter end of May, but then againe, heat will be restored seasonable, for the time of the yeare.

Summer.

SUmmer beginneth the eleauenth day of June, at three of the clocke, and nine minutes after noone, Sol then making his ingresse into the Tropicall signe Cancer: and beeing elenated 61. degrees, twelue minutes aboue our Horizon at noone, is at his nigheſt approch to our Zenith, and at his farthest digression from the Æquator, to the quantitie of twenty three degrees, 32. minutes: and by the proiection of his races most perpendicular of all the yeare, causeth the greatest heate, and by his greatest declination, maketh his Diurnall Arch longest, and Nocturnall shortest of all the yeare. By Nature it is hot and dry, and most like to retaine his naturall inclination, but that June will seeme paraduenture somewhat to wet, from the midst to the end. July will bee very tempestuous, and August parched North, great heate and drought, as also the beginning of September.

Autumne.

THE Sunne now seited in the point, Equidistant from the Poles of the world, reuolueth his Paralel, in all places of the world with equall succession of day and night,

night, vpon the thirteenth day of September, at foure of the clocke, and one minuite in the Morning, entering the Æquinoctiall signe Libra, then again, being eleuated our Horizon at noon tide, 37. degrees, & 40. minuts. This Quarter is temperate, hot, and moyst, by proper disposition, which it will obserue, for September from the midst forward, will be very temperate at the end, somewhat moist, with diuers shewers. October will yeelde eft-soone morn Frosts, and some fall of wet. About the midst of November, is like to bee very seasonable, and the first part of December, good store of moysture.

The disposition of the Aire for each day, of euery month of this present yeare 1609. as is probable to befall, according to the prefigurations of the Celestiall Orbes.

Ianuary.

Daies of the month.	Sun rise.		Sunne set.		Daies length.		Nights lengt.	
	Hou.	mi	Hou.	min.	Houre,	minut.	Houre,	minut

15	8	13	3	47	7	34	16	26
25	8	3	9	51	7	42	16	28

The 1, 2, 3, 4. 5, 6, and 7. great store of cold stormy moysture, the 8, 9, 10, and 11. apt for the time, the 12, and 13. raine, the 14, 15, 16, and 17. high winds, the 18, 19, 20, 21, 22, and 23. wet and boysterous, the 24, 25, and 26. more seasonable, the 27, 28, 29, 30, and 31. Showres.

A description of the Eclipses happening this present yeare. 1609.

There will happen fiue Eclipses of the two bright shining Lampes of Heauen, three of the ☉, and three of the ☽. Of the which, the two first of the ☽, onely are visible in our Horizon.

The first Eclipse will bee of the Moone, vppon the tenth day of January, at one of the clocke, and 35. minutes in the Morning, the Digits eclipsed, will bee nine, and 28. minuts: And ỳ totall duration from the beginning to the end, three houres, and 17. minuts, the Moone appearing first to our sight, to incurre the shadow of the earth at midnight, and so continuing, still wading further in darkenesse, to one of the clocke, and 35. minutes, and as then at her greatest obscuration, will by little and little recouer her borrowed light, and by three of the clocke and foureteene minutes, will bee wholly rid of the earths shadow, and appeare in her ful light. The Moone then sojourning in the 29. degree, 41. minuts,

minutes of ♋, nere the ♌, and oppoſite to Sol. Is it may be ſeene of vs.

The ſecond Eclipſe is Solar, and will happen the 25. day of January, at foure of the clock after noon, both the lightes then ioyned in 15. degrees, 27. minutes of ♒, neere the ♆. The Digits eclipſed, will bee ſeauen, and fozty ſixe minuts, and from the beginning to the end two houres, 31. minuts, as it will preſent it ſelfe to the view of our Antipodes, but of vs no eclipſe can be ſeene.

The third Eclipſe Lunar, is obiected to our ſight, the firſt day of July, at eleauen of the clock, and nine minuts at night, the Moon then reſident in the 23. degree, 57. minuts of ♑, neere the ♆, will beginne to bee nu-merged in ☽ earths ſhade, at nine of the clock, and eleauen minuts. At her greateſt darkeneſſe (as then eclipſed to the quantity of 17. points) at eleauen of the clock and nine minutes: and wholy vnmaſked, at one of the clocke and eight minutes, ſo that from the beginnug to the end, is three houres, 56. minuts.

The fourth Eclipſe of the Sunne, appeareth not to vs, but to the Mexicanes in this ſozt. The twentith of July, at nine of the clocke, and eyghteene minutes, the Sun will ſuffer a loſſe of light, to the quantity of ſixe points. The totall duration thereof being two houres, and two minuts, and both ☽ Lumniaries thē ſeited toge-ther in the ſeauenth degree, and 17 minutes of ♌, neere the ♌.

The fift Eclipſe of the Sunne, happeneth the 16. day of December, at ſixe of the clock, 42. minutes in the Mozning, the Moone then poſſeſſing the ſame degrees & and minute with Sol, and intercepting his light to the quantity of three Digits, and fifty minutes, both the lights then hauing their full courſes in the fourth de-gree, 12. minutes of ♑, neare the ♆. The whole durance whereof will be two houres and 12. minutes, as it preſenteth it ſelf to the Inhabitants of the confines of Moſcouia and Tartaria, but not to be ſeene of vs.

The

A Prognostication

The first Eclipse Lunar, will happen the 30. day of December, at eleauen of the clocke, 45. minutes before noone. So that the beginning thereof will be at nine of the clocke, 49. minuts, the middest and greatest darkenesse, at eleauen and 45. minutes, and the end at one of the clocke, and 41. minuts. The whole continuance being three houres, 53. minuts. The Digits eclipsed will be 20. And the Moone then possessing the 18. degree, 41. minutes of ♋, neere the ☊. As it appeareth to our Antecians and Antipodes, but not visibly in our Horizon.
